The invention relates to a novel isolated polynucleotide comprising a plant nucleotide sequence having an open reading frame that encodes a polypeptide associated with disease resistance or its fragment having substantially the same activity as the full-length polypeptide. The polynucleotide of the invention is useful for conferring resistance or tolerance to a plant pathogen. The present sequence represents a prote

conferring disease resistance used

present sequence represents in the invention.

resistance or esents a prote

protein

New polynucleotide comprising a plant nucleotide sequence having an open reading frame that encodes a polypeptide associated with disease resistance, useful for conferring resistance or tolerance to a plant

                     The invention relates to novel abiotic stress responsive polynucleotides and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test
                                                                                                                                                                                                                                                                                 New stress-responsive nucleic acid, useful for altering the responsiveness of a plant, e.g. cereal, to an abiotic stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rice abiotic stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

The nucle molecule and the polypeptide encoded by it are useful in altering responsiveness of a plant to an abiotic stress, such as cold stress stress or any of their combinations. The present is used in the exemplification of the invention
  Claim
                                         Novel isolated polynucleotide useful for fragment encoding a Myb-related transcrip
                                                                                                                                                                           Cahoon RE,

The isolated polynucleotide is useful for Obtaining a nucleic acid fragment encoding an Myb-related transcription factor polypeptide by using it to probe CDNA or genomic libraries. A nucleic acid fragment obtained using the isolated polynucleotide is useful to isolate cDNAs and genes encoding homologous proteins from the cuseful to isolate cDNAs and genes encoding homologous proteins from the same or other plants in which the Myb-like protein is present at higher or lower levels than normal or in cell types. This sequence represents the protein of an Myb-related transcription factor of the
                                                                                                                                                                                                                                                                                                                                                                                               ADH50100 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises the amino acid and coding sequences of Mybrelated transcription factors - these proteins are involved in transcriptional regulation in plants. The DNA and protein sequences of the invention may be used to facilitate studies to better understand gene regulation in plants and provide genetic tools to enhance or otherwise alter the expression of genes controlled by Myb-related transcription factors. The present amino acid sequence represents an Myb-related transcription factor of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A new isolated plant transcription factor

The polynucleotide of the invention is useful for conferring resistance or tolerance to a plant pathogen. The present sequence represents a gene conferring disease resistance used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 162 AA;

                                                                                                                                                   Ś
                                                                                                                                                                                                                                                                                                         CC and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are CC methods for using the polynucleotides and polypeptides to alter the CC responsiveness of a plant to abiotic stress. The invention is useful in CC agriculture. The nucleic acid is useful for determining whether a test CC plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated CC polynucleotide expression in a plant cell, and to identify a homolog or cortholog to an abiotic stress responsive polynucleotide. The nucleic acid CC molecule and the polypeptide encoded by it are useful in altering the CC responsiveness of a plant to oan abiotic stress, such as cold stress, salt stress, osmotic stress or any of their combinations. The present sequence is used in the exemplification of the invention

transgenic; plant; enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; flowering; flower structure; stem bifurcation; branching pattern; apical dominance; trichome; stem morphology; root growth; root hair; seed development; cell proliferation; cell differentiation; premature senescence; necrosis; plant size; leaf morphology; seed morphology; seed biochemistry; root anthocyanin; plant anthocyanin; light response; shade avoidance; bioinformatic; transcription factor; gene; ds.
                        pattern, reduced apical dominance, reduced trichome density; lack of trichomes; reduced ectopic trichome development; altered trichome development; increase in trichome number; altered stem morphology; increased root growth; increased root hairs; altered stem morphology; altered cell proliferation or cell differentiation; rapid development; premature senescence; increased necrosis; increase in seedling or plant size; decreased plant size; leaf morphology; seed morphology; seed biochemistry; increase in root anthocyanins; increase in plant anthocyanins, or alteration in light response or shade avoidance. The transgenic plant, polynucleotides and polypeptides are useful in bioinformatic search methods. This is the amino acid sequence of a plant transcription factor, and an orthologue of Arabidopsis thaliana transcription factor; solated in the invention, that can be used in the creation of a transgenic plant with altered traits.
                                                                                                                                                                                                                                                                 The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully defined in the specification or its complement. The method of the invention can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sherman BK,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              48.9%;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     285 AA
```

```
Its amino acid sequence was deduced from an isolated cDNA clone (see AAV19105). The encoded protein comprises a basic N-terminal region with 2 imperfect tryptophan repeats, a potential ATP/GTP binding site or P-loop, a redox sensitive cysteine and a nuclear localisation sequence. The acidic C-terminus forms amphipathic alpha-helices which are characteristic of transcriptional activation domains. The Mybl protein can be used to identify other proteins involved in both the hypersensitive and acquired disease resistant responses of plants, and also to raise Mybl-specific antibodies. The invention also provides novel transgenic plants, transformed with a vector including the mybl gene, with enhanced disease resistance to certain pathogens. (Updated on 17-OCT -2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                            Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel method for altering one or more plant CC characteristics. Specifically, it refers to identifying genes that are up CC - or down-regulated in transgenic plants overexpressing the heterodimeric CE 2Fa/Dpa transcription factor of Arabidopsis and using these sequences to CC alter plant characteristics accordingly. The present invention describes CC generating transgenic plants for the production of growth regulators, where CC enzymes, therapeutics, pharmaceuticals and animal feed products, where CC the altered plant characteristics are selected from increased yield or physiology, altered endoreduplication, blochemistry, signal CC transduction, storage lipid mobilisation and/or altered photosynthesis, CC each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers CC role in a variety of biological processes such as DNA replication, cell coli in a variety of biological processes such as DNA replication, cell constraint factors. This polypeptide sequence is thale cress protein convertion.

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the lectronic form from the US patent office at the polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme compositic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, recombination in plants, for improving yield by modification of plant or plants, for improving yield by modification of phonologous recombination in plants, for improving yield by modification of phonologous recombination in glants, for improving yield by modification of construct of the photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or physical and/or physical and/or physical construct of the plants of the used in the recombinant DNA construct of the

                                                                                   polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at the sequence sequence them!?Doc!D:200403488. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of the cell cycle pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tole extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance;
   photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (LIUJ/)
